**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

## Office Action Summary

**Application No.**

10/575,705

**Applicant(s)**

FUTA ET AL.

**Examiner**

SENG H. LIM

**Art Unit**

3714

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 15 July 2008.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-4, 6-14 and 16 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-4, 6-14 and 16 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-8508)  
Paper No(s)/Mail Date \_\_\_\_\_
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: \_\_\_\_\_

**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

**Claims 1-4, 6-14 and 16** are rejected under 35 U.S.C. 103(a) as being unpatentable over Miyamoto (EP0991007A1) in view of Borge (US 2005/0059483 A1).

Re Claim 1. Miyamoto discloses a game system comprising a first game execution apparatus and a second game execution apparatus that have different internal structure from each other (Fig. 4), wherein the first game execution apparatus [0038] includes: a first program reading unit operable to read, from a first game

recording medium, a first game program that indicates a procedure of a game [0020]; a first character reading unit operable to read, from a portable recording medium, predetermined character data that indicates an attribute of a character that appears in the game [0029]; a first input unit operable to receive an inputting operation from a user; and a first game execution unit operable to proceed with the game according to the inputting operation received at the first input unit and the procedure indicated by the first game program, and to cause the character appear in the game in accordance with the predetermined character data read by the first character reading unit [0042], and the second game execution apparatus [0044] includes: a second program reading unit operable to read, from a second game recording medium, a second game program that indicates the procedure of the game [0021]; a second character reading unit operable to read the predetermined character data from the portable recording medium [0029]; a second input unit operable to receive an inputting operation from the user; and a second game execution unit operable to proceed with the game according to the inputting operation received at the second input unit and the procedure indicated by the second game program, and to cause the predetermined character appear in the game in accordance with the character data read by the second character reading unit wherein the predetermined character has plurality of attributes [0048].

Miyamoto does not disclose the apparatus comprising a first and second permission information reading unit operable to read permission information that indicates which attribute from the plurality of attributes is permitted to be changed by the assigned game execution apparatus, and in accordance with the read permission

information, the game execution unit change the attribute permitted to be changed by the game execution apparatus as the game proceeds, and prohibit an attribute not permitted to be changed by the game execution apparatus from being changed. However, the concept of unlocking game characteristics of characters such as traits, weapons, weaknesses, etc is well known in the art as evidenced by Borge [0027]. In this instance once an unlocked characteristic of a character is unlocked and saved in a storage medium, a player can go to other game execution apparatus and load the unlocked characteristics of the character. The permission information would be a code to let the game execution apparatus know to change the attribute of a character because it was already unlocked. It is obvious to one of ordinary skill in the art that each game execution apparatus would have its own permission information reading unit, hence inputting the game recording medium to a second game execution apparatus requires the second permission information reading unit to read second permission information. It would have been obvious to one of ordinary skill in the art at the time of the invention to have modified Miyamoto in view of Borge to include an unlocking character features to increase player's excitement with the game by providing new/enhanced features (Abstract).

Re Claim 2, 8 & 16. Miyamoto discloses a game execution apparatus comprising program reading unit operable to read, from a game recording medium, a game program that indicates a procedure of a game [0020]; a character reading unit operable to read, from a portable recording medium, character data that indicates an attribute of a character that appears in the game [0029]; an input unit operable to receive an

inputting operation from a user [0064]; and a game execution unit operable to proceed with the game according to the inputting operation received at the input unit and the procedure indicated by the game program, and to cause the character to appear in the game in accordance with the character data read by the character reading unit wherein the character has plurality of attributes [0048].

Miyamoto does not disclose wherein the apparatus comprises a permission information reading unit operable to read permission information that indicates which attribute from the plurality of attributes is permitted to be changed by the assigned game execution apparatus, and in accordance with the read permission information, the game execution unit change the attribute permitted to be changed by the game execution apparatus as the game proceeds, and prohibit an attribute not permitted to be changed by the game execution apparatus from being changed. However, the concept of unlocking game characteristics of characters such as traits, weapons, weaknesses, etc is well known in the art as evidence by Borge [0027]. In this instance once an unlocked characteristics of a character is unlocked and saved in a storage medium, a player can go to other game execution apparatus and load the unlocked characteristics of the character. The permission information would be a code to let the game execution apparatus know to change the attribute of a character because it was already unlocked or not change the attribute of a character if it's not unlocked yet (*which also rejects claim 8 & 16*). It would have been obvious to one of ordinary skill in the art at the time of the invention to have modified Miyamoto in view of Borge to include an unlocking

character features to increase player's excitement with the game by providing new/enhanced features (Abstract).

Re Claim 3. Miyamoto does not disclose a request of character data from a server via a network and writing the obtained character data to portable recording medium; Borge discloses a request of character data from a server via a network and writing the obtained character data to a recording medium (Fig. 1). At the time of invention a person of ordinary skill in the art would have found it obvious to connect the gaming apparatus to a network server and would have been motivated to do so to increase game interactions with other players in different location.

Re Claim 4. Miyamoto discloses the apparatus further includes a determining means for determining based on the data memory means if it is usable or not (i.e. authenticity) and an inapplicable notifying means notifies inapplicability when not usable is determined by the use determining means [0022]. The character reading unit would read the character data when the authenticity has been ensured.

Re Claim 6-7. Miyamoto discloses the apparatus to include a game recording medium wherein it permits change to the character's characteristics and prohibits the change of the character's characteristics according to permissible information based on a player-by-player basis in a manner discriminating one's data from others [0054]. Each new captured character is stored or written into the portable recording medium or overwrites the pre-existing character data with the new one when the character changes [0054-0055].

Re Claim 9. Miyamoto discloses an external storage unit comprising a storage unit; the external storage unit authenticates the main unit peripheral interface (i.e. game apparatus) [0022] and implicitly an output unit operable to, when the authenticity has been ensured, read the data from the storage unit and output the data to the game apparatus, wherein the character has plurality of attributes [0022].

Miyamoto does not disclose a portable recording medium to store therein a permission information that indicates which attribute from the plurality of attributes is permitted to be changed by the assigned game execution apparatus, and in accordance with the read permission information, the game execution unit changes the attribute permitted to be changed by the game execution apparatus as the game proceeds, and prohibits an attribute not permitted to be changed by the game execution apparatus from being changed. However, the concept of unlocking game characteristics of characters such as traits, weapons, weaknesses, etc is well known in the art as evidenced by Borge [0027]. In this instance once an unlocked characteristic of a character is unlocked and saved in a storage medium, a player can go to other game execution apparatus and load the unlocked characteristics of the character. The permission information would be a code to let the game execution apparatus know to change the attribute of a character because it was already unlocked or not change the attribute of a character if it's not unlocked yet. It would have been obvious to one of ordinary skill in the art at the time of the invention to have modified Miyamoto in view of Borge to include an unlocking character features to increase player's excitement with the game by providing new features.

Re Claim 10. Miyamoto discloses a game execution method comprising program reading step of reading, from a game recording medium, a game program that indicates a procedure of a game [0020]; reading, from a portable recording medium, character data that indicates an attribute of a character that appears in the game [0029]; receiving an inputting operation from a user [0064]; and proceeding with the game according to the inputting operation received at the input unit and the procedure indicated by the game program, and cause the character to appear in the game in accordance with the character data read by the character reading unit [0048], wherein the character has plurality of attributes.

Miyamoto does not disclose that the apparatus comprises a permission information reading unit operable to read permission information that indicates which attribute from the plurality of attributes is permitted to be changed by the assigned game execution apparatus, and in accordance with the read permission information, the game execution unit change the attribute permitted to be changed by the game execution apparatus as the game proceeds, and prohibit an attribute not permitted to be changed by the game execution apparatus from being changed. However, the concept of unlocking game characteristics of characters such as traits, weapons, weaknesses, etc is well known in the art as evidenced by Borge [0027]. In this instance once an unlocked characteristics of a character is unlocked and saved in a storage medium, a player can go to other game execution apparatus and load the unlocked characteristics of the character. The permission information would be a code to let the game execution apparatus know to change the attribute of a character because it was already unlocked

or not change the attribute of a character if it's not unlocked yet. It would have been obvious to one of ordinary skill in the art at the time of the invention to have modified Miyamoto in view of Borge to include an unlocking character features to increase player's excitement with the game by providing new features.

Re Claim 11. Miyamoto discloses a game execution program comprising reading, from a game recording medium, a game program that indicates a procedure of a game [0020]; reading, from a portable recording medium, character data that indicates a characteristic of a character that appears in the game [0029]; receiving an inputting operation from a user [0064]; and proceeding with the game according to the inputting operation received at the input unit and the procedure indicated by the game program, and make the character appear in the game in accordance with the character data read by the character reading unit [0048], wherein the character has plurality of attributes.

Miyamoto does not disclose wherein the apparatus comprises a permission information reading unit operable to read permission information that indicates which attribute from the plurality of attributes is permitted to be changed by the assigned game execution apparatus, and in accordance with the read permission information, the game execution unit change the attribute permitted to be changed by the game execution apparatus as the game proceeds, and prohibit an attribute not permitted to be changed by the game execution apparatus from being changed. However, the concept of unlocking game characteristics of characters such as traits, weapons, weaknesses, etc is well known in the art as evidence by Borge [0027]. In this instance once an unlocked characteristics of a character is unlocked and saved in a storage medium, a player can

go to other game execution apparatus and load the unlocked characteristics of the character. The permission information would be a code of some sort to let the game execution apparatus know to change the attribute of a character because it was already unlocked or not change the attribute of a character if it's not unlocked yet. It would have been obvious to one of ordinary skill in the art at the time of the invention to have modified Miyamoto in view of Borge to include an unlocking character features to increase player's excitement with the game by providing new features.

Re Claim 12-13. Miyamoto does not disclose a request of character data from a server via a network and writing the obtained character data to portable recording medium; Borge discloses a request of character data from a server via a network and writing the obtained character data to a recording medium (Fig. 1). At the time of invention a person of ordinary skill in the art would have found it obvious to connect the gaming apparatus to a network server and would have been motivated to do so to increase game interactions with other players in different location.

Re Claim 14. Miyamoto discloses a computer-readable recording medium that stores a game execution program wherein the program has a game execution apparatus to execute reading, from a game recording medium, a game program that indicates a procedure of a game [0020]; reading, from a portable recording medium, character data that indicates a characteristic of a character that appears in the game [0029]; receiving an inputting operation from a user [0064]; and proceeding with the game according to the inputting operation received at the input unit and the procedure indicated by the game program, and make the character appear in the game in

accordance with the character data read by the character reading unit wherein the character has plurality of attributes [0048].

Miyamoto does not disclose wherein the apparatus comprises a permission information reading unit operable to read permission information that indicates which attribute from the plurality of attributes is permitted to be changed by the assigned game execution apparatus, and in accordance with the read permission information, the game execution unit change the attribute permitted to be changed by the game execution apparatus as the game proceeds, and prohibit an attribute not permitted to be changed by the game execution apparatus from being changed. However, the concept of unlocking game characteristics of characters such as traits, weapons, weaknesses, etc is well known in the art as evidence by Borge [0027]. In this instance once an unlocked characteristics of a character is unlocked and saved in a storage medium, a player can go to other game execution apparatus and load the unlocked characteristics of the character. The permission information would be a code of some sort to let the game execution apparatus know to change the attribute of a character because it was already unlocked or not change the attribute of a character if it's not unlocked yet. It would have been obvious to one of ordinary skill in the art at the time of the invention to have modified Miyamoto in view of Borge to include an unlocking character features to increase player's excitement with the game by providing new features.

***Response to Arguments***

Applicant's arguments with respect to claim July 15, 2008 have been considered but are moot in view of the new ground(s) of rejection.

***Correspondence***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to SENG H. LIM whose telephone number is (571)270-3301. The examiner can normally be reached on 9:30-6:00, Monday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Peter Vo can be reached on 571-272-4690. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
